Summary

Backend and platform engineer with 10+ years of hands-on experience across backend systems, cloud infrastructure, networking, and distributed architectures. Strong background in Kotlin, PHP, Python, Java, AWS, Kubernetes, messaging, identity, and software quality, shaped by work in ISP operations and large-scale event platforms. Combines backend depth with infrastructure pragmatism to design reliable systems, modernize legacy flows, and improve engineering execution.

Experience

Backend Specialist - Sympla

2025 - Present

- Drove platform and architecture initiatives around API gateway evolution, identity flows, and backend modernization for a large-scale digital platform.
- Led the KrakenD implementation path to replace the current gateway, improving the foundation for more consistent traffic management and service composition.
- Evolved Keycloak with Java and Quarkus and helped design a new registration flow in Kotlin with Spring Boot and coroutines.
- Applied AI-assisted engineering practices with technical specs, PRDs, Rules, and Skills to improve delivery productivity, code structure, and test discipline.

Tech Stack: Kotlin, Spring Boot, Coroutines, Java, Quarkus, Keycloak, KrakenD, OAuth 2.0

Senior Software Engineer - Sympla

2023 - 2025

- Worked across Access, Architecture, Blockchain, and Data Intelligence initiatives, contributing to critical backend and platform domains.
- Rebuilt login and registration flows and evolved account, authentication, and authorization domains with stronger identity and access patterns.
- Implemented Keycloak based on OAuth 2.0 best practices and expanded event-driven services with Kafka, SNS, and SQS.
- Delivered backend services in Kotlin, Java, WebFlux, PHP, and Python, including serverless workloads on AWS Lambda and scalable APIs on Kubernetes.

Tech Stack: PHP 7/8, Symfony, Kotlin, Java, WebFlux, Python, AWS Lambda, Kafka, SNS, SQS, MySQL, PostgreSQL, DynamoDB, Docker, Kubernetes, PHPUnit, JUnit

Software Engineer - Deliver IT (C6 Bank team)

2022 - 2023

- Designed and evolved PHP systems in a financial environment, including electronic funds transfer flows and integration-heavy backend services.
- Supported both modern and legacy codebases across Laravel 5, CodeIgniter, Angular/JavaScript, and TypeScript workflows.
- Strengthened code quality practices with PHPUnit, UML flow and sequence diagrams, and consistent use of SOLID, DRY, and YAGNI.
- Worked directly with AWS infrastructure components used by the platform, including EC2, RDS for SQL Server, SQS, MemCache, Docker, and EKS.

Tech Stack: PHP, Laravel 5, CodeIgniter, Angular, JavaScript, TypeScript, PHPUnit, UML, Docker, EKS, EC2, RDS, SQS, MemCache, GitHub Actions

Senior Backend / DevOps Engineer | Dump Tecnologia

2019 - 2022

- Strengthened backend and DevOps operations for PHP systems, REST integrations, and containerized microservices in production environments.
- Maintained and evolved Laravel and Lumen services, technical documentation, and automation routines for engineering workflows.
- Built scraping and browser automation flows with Selenium and Selenoid in Python and PHP for operational use cases.
- Operated across SQL and NoSQL stacks and improved automation through Ansible, GitHub Actions, and GitLab-based CI pipelines.

Tech Stack: PHP, Laravel, Lumen, Python, Selenium, Selenoid, PostgreSQL, MySQL, MariaDB, SQLite, Redis, Memcached, Docker, Ansible, GitHub Actions, GitLab CI

Technical Lead, Infrastructure and Software - Masternet Telecom

2012 - 2019

- Built and evolved an internal operations platform that digitized contracts and service workflows, helping modernize the company and support the onboarding of roughly 2,000 customers.
- Automated key business processes across support, sales, finance, inventory, scheduling, address changes, maintenance, and equipment pickup.
- Designed a 100% routed network using OSPF, BGP, and MPLS, and implemented switching, DNS, firewall, Huawei routing and OLT infrastructure, Linux servers, and data center redundancy foundations.
- Helped scale the environment from about 200 Mb of aggregate traffic to more than 20 Gb at peak, while training other professionals to operate and evolve the platform and infrastructure.

Tech Stack: PHP, Python, MySQL, Linux, BGP, OSPF, MPLS, DNS, Firewalls, Huawei, MikroTik, Citrix, Proxmox, Hyper-V

Technical Support and Operations Developer - L&C Telecom

2011 - 2012

- Started in technical support and operations for a small ISP while also contributing to sales, customer administration, and field coordination.
- Built an internal scheduling system with authentication, installer task segregation, logs, and city-based organization to improve operational visibility.
- Created the company website and developed early backend skills by learning PHP and web fundamentals directly from production problems.
- Expanded into router configuration, process standardization, and installer management as operational responsibilities increased.

Tech Stack: HTML, CSS, PHP, Networking, Technical Support, ISP Operations

Projects

Agenda Internal Operations Platform

- Built an in-house platform to centralize contracts, customer data, scheduling, maintenance, address changes, and operational workflows for an ISP environment.
- Reduced dependence on physical archives and manual coordination, improving day-to-day execution across multiple departments.

Tech Stack: PHP, MySQL, Linux, Internal Tooling, Process Automation

AWS Cloud Migration

- Led a strategic migration of on-premise workloads to AWS, balancing lift-and-shift with selective re-architecture decisions.
- Improved platform resilience, observability, and creating room for future growth.
- Tech Stack: AWS, Docker, Kubernetes, Terraform, Observability.

Selenium / Selenoid Automation Platform

- Built an internal automation platform to execute repetitive operational tasks using browser-based robots running in Docker containers powered by Selenoid.
- Designed a task orchestration system with queueing, prioritization, retry strategies, and a state machine to manage task lifecycle (pending, running, failed, completed).
- Enabled automation of accounting and back-office workflows by simulating real user interactions in isolated browser sessions, including form filling, data extraction, and file retrieval.
- Improved operational efficiency by reducing manual workload and ensuring consistent execution of high-volume, repetitive processes.

Tech Stack: PHP, Docker, Selenium, Selenoid, Queue Systems, State Machine, Process Automation

Education

B.Sc. in Software Engineering - UNINTER Centro Universitario Internacional *2021 - Interrupted*

- Academic focus on architecture, software quality, modeling, and system evolution, reinforcing hands-on experience in backend and infrastructure

Certifications

- Domain-Driven Design, Alura, Feb 2026
- Kotlin Learning Path, Alura, Feb 2026
- Datadog Power User, Appoena, Feb 2026
- Datadog Fundamentals, Appoena, Feb 2026
- AI for Devs, Branas, 2026
- Testing and TDD with PHP and PHPUnit, Udemy, May 2023
- DevOps Tools, TargetTrust, Jan 2020
- BCOP EAD, NIC.br, Aug 2020
- Switches DmOS, Datacom, Apr 2019
- MTCSE, MikroTik, Dec 2019
- MTCUME Mikrotik, Aug 2019
- MTCRE, MikroTik, Sep 2018
- MTCNA, MikroTik, Jul 2018
